

# Today's Vascular Surgeon Surgery is only part of our story<sup>SM</sup>

## Focused on creating strong partnerships for comprehensive vascular care.

Comprehensive vascular care requires close collaboration and communication between vascular surgeons, primary care physicians and patients. Working together, we develop patient-centered care plans based on established, evidence-based care pathways as well as our latest research and advances. That includes new insights on prevention, diagnosis, multiple surgical interventions, and ongoing management of vascular disease that you can share with your at-risk patients.

Learn more about how we partner with you to make comprehensive vascular health part of your patients' healthy future.
